PROJECTS

1. [My Muzik](#)

My Muzik is a web application, integrated with the Spotify Web API, which shows a user their personalized Spotify data. The app makes it easy for users to view their top artists, recently played tracks, top tracks, analysis for each track/artist. The user can also get recommendations, allowing them to discover new artists.

2. [Lompasago Sacco Website](#)

Designed and built a concept website of Lompasago Sacco. Added loading and subtle page animations, and used different website colors that are more vibrant that represent the organization.

3. [Glam Beauty Parlour Website](#)

Worked in a team of two to design and build the web interface of a beauty parlour business, which also has a mobile application.

4. [C-Profiles](#)

This is a web app that makes it easy and quick for github users to view their account information and repository details, including languages used for each repository. The app uses Chart.js that allows visualizations of a user's top languages.

5. [Personal Website V3](#)

Third iteration of my personal website built with Vue.js. Made major changes to the website and integrated smooth scrolling when viewed on desktops.
